No. of Printed Pages: 07

[56]

SARDAR PATEL UNIVERSITY

B.C.A Examination, 2nd Semester

Date: 11/01/2020

Time: 2:00 P.M to 5:00 P.M

Subject Code: US02CBCA21

Subject: Advance C Programming

Total Weight age/Marks: 70

Q.1 Multiple Choice Questions.

10

1. In prototype declaration, specifying _____ is optional.
A. parameter name B. semicolon
C. data type D. return type
2. A _____ statement that returns the value evaluated by the function.
A. goto B. break
C. return D. none
3. A function declaration is also known as _____.
A. function implementation B. function call
C. function prototype D. function type
4. _____ Operator connects the structure name to its member.
A. underscore B. dot
C. ! D. none
5. Size of a union is determined by size of the _____.
A. First member in the union B. Last member in the union
C. Sum of the sizes of all members D. Biggest member in the union
6. Which of the following cannot be a structure member?
A. Another structure B. Function
C. Array D. none
7. Which of the following is not a C memory allocation function?
A. alloc() B. calloc()
C. malloc() D. realloc()
8. How will you free the allocated memory?
A. remove(ptr) B. free(ptr)
C. dealloc(ptr) D. destroy(ptr)
9. f = fopen(filename, "r");

Referring to the code above, what is the proper definition for the variable f?

- A. FILE F; B. struct file f;
C. FILE *f; D. int f;
10. The mode _____ is used for opening a file for updating.
A. a B. r
C. w D. r+

P.T.O

Q.2	Answer the following questions in short. (Any 10)	20
	1) What is actual and formal parameter?	
	2) Which the advantages are of divide the program into functions?	
	3) Write and explain syntax for function call.	
	4) Write and explain syntax for structure definition.	
	5) Define a union called "item" consisting of an integer called code, character string called nm and float value called price. Declare union variable called product along with definition.	
	6) Which elements are required for compile time initialization of a structure variable?	
	7) List benefits of pointer.	
	8) Explain pointer increment and scale factor in brief.	
	9) Define pointer variable.	
	10) Write down the syntax to open the text file both in read and write mode.	
	11) Differentiate: printf and fprintf.	
	12) Differentiate: scanf and fscanf.	
Q.3(A)	What is Function Declaration? Explain passing 1-D array to function with example.	06
(B)	Explain function with no return type and no parameters.	04
	OR	
Q.3(A)	What is Recursion? Explain recursive function with example.	06
(B)	Explain function with return type and with parameters.	04
Q.4(A)	Explain declaring structure variable with syntax and example.	06
(B)	Differentiate structure and union.	04
	OR	
Q.4(A)	Which different methods for transferring structure from one function to another function? Explain any one method with example.	06
(B)	Explain array within structure with example.	04
Q.5(A)	Explain declaration and initialization of pointer variable with syntax and example.	06
(B)	Explain malloc() with syntax and example.	04
	OR	
Q.5(A)	Explain pointer arithmetic expressions and pointer to array in detail with example.	06
(B)	Explain calloc() with syntax and example.	04
Q.6(A)	Explain getc() and putc() in detail with syntax and example.	10
	OR	
Q.6(A)	Explain getw() and putw() in detail with syntax and example.	10
