BCA Semester-3 External Examination – October-2025 [NEP]

US03MABCA02 || (DBMS) DataBase Management System - I

Date : 07 -10- 2025

Time : 02.00 p.m. – 04.30 p.m.

Total : 50 Marks

Q-1 Select the appropriate option for the following questions:

[10]

- 1) Which integrity constraints states that no primary key value can be null.
A Entity B. Referential C. Domain D. Simple
- 2) Column of the relation are referred as _____.
A. Relationship B. Tuples C. Attributes D. Record
- 3) _____ Query is not an auto committed query.
A Insert B Create C Alter D Drop
- 4) _____ Clause is use with select statement to display unique records of a column specified.
A Order by B display C between D Distinct
- 5) The data held across the primary key column must be _____.
A. Unique
B. Repetitive
C. NULL
D. Simple
- 6) A _____ integrity constraint requires that a condition be TRUE or UNKNOWN for the row to be processed.
A. NULL
B. CHECK
C. NOT NULL
D. Default
- 7) The concept of joining multiple tables is called _____.
A. Cross joins B. Outer join C Edit join D Inner join
- 8) To make the change permanent a _____ statement has to be given at the SQL statement.
A Commit B save point C roll back D view
- 9) _____ represents relationships between tables.
A Foreign Key B Primary key C Unique D Default
- 10) To reduce redundant data to the minimum possible and object is create called _____.
A Synonym B Views C Sequences D Indexes

Q-2 What is relationship? Explain types of relationship. [10]

OR

Q-2 What is normalization? Explain 1st NF, 2nd NF and 3rd NF with example. [10]

Q-3 Explain create command and various ways to insert records in a table with example. [10]

OR

Q-3 What is DML? List and explain any three commands with appropriate syntax and example. [10]

Q-4 What is data constraints? Explain Unique and check constraints with syntax and example. [10]

OR

Q-4 List all the Operators used in SQL and explain any three of them with appropriate example. [10]

Q-5 Explain group by & having with example. [10]

OR

Q-5 What is subquery? Explain subquery with its types. [10]
