

No. of Printed Pages: 2

[96]A-7]

SARDAR PATEL UNIVERSITY

S.Y.B.C.A. (3rd Semester) (CBCS) Examination, *January* - 2021

US03BCA23 : Object Oriented Programming - I

Date: 01-01-2021, Friday.

Time: 2-00 to 4-00 pm

Total Marks : 70

Q.1 Multiple choice questions:

[10]

1. A _____ is a collection of objects of similar type.
A. Data
B. Object
C. Class
D. Function
2. _____ means "To bind data & functions into a single unit"
A. Inheritance
B. Polymorphism
C. Data hiding
D. Encapsulation
3. _____ means ability to take more than one form.
A. Inheritance
B. Polymorphism
C. Data hiding
D. Encapsulation
4. _____ is used to free/destroy the memory occupied by the objects.
A. Constructor
B. Destructor
C. Delete
D. None of Above
5. _____ function is used to copy one string into another string.
A. strcpy()
B. stringcpy()
C. strcopy()
D. StrCopy()
6. Which of the following is not a valid argument passing mechanism in C++?
(A) Pass by value
(B) Pass by address
(C) Pass by reference
(D) Pass by selection
7. _____ is a non-member function which can access private & protected members of some other class.
(A) friend function
(B) virtual function
(C) operator function
(D) pure virtual function
8. _____ is process by which objects of one class get the properties of other class.
A. Inheritance
B. Polymorphism
C. Data-hiding
D. Encapsulation
9. The correct function name for overloading the addition (+) operator is
A. operator+
B. +operator
C. operator(+)
D. operator:+
10. Which one of the following operators cannot be overloaded?
A. the function call ()
B. +=
C. >>
D. ?:

Q.2 (A) Fill In the blanks.

[08]

1. The header file _____ should be included that use input/output statements.
2. _____ operator in C++ is the same as "scanf()" function used in C.
3. By default, return type of main() function in C++ is _____.
4. How many operand can be use with the unary operator.

C 13

[P.T.O.]

(B) TRUE/FALSE

1. C++ allows declaration of variables at anywhere before it is used in executable statement.
2. Constructor is special member function because its name is same as the class name.
3. Defining a function with same name but different types & no. of arguments is known as function overloading.
4. A pointer is a variable that stores address of other variable.

Q.3 Attempt any Ten out of Twelve.

[20]

1. List out any four header file in C++.
2. Differentiate variable and constant.
3. List out types operator available in C++.
4. Write syntax for declare & initialize one dimensional array with example.
5. Define string and write how to declare string in C++.
6. List all access specifiers and also write its use.
7. Discuss default arguments briefly
8. What is a virtual base-class? What is the use of it?
9. What is inline function? Give an example of it.
10. What is pointer?
11. List the operators that can't be overloaded?
12. What are input and output stream?

Q.4 Attempt any Four out of Eight.

[32]

1. What is OOP? Explain features (characteristics) of OOP in detail.
2. Explain different data type and operators available in C++.
3. What is constructor? Explain types of constructor.
4. Explain different kind of objects support in C++.
5. What is inheritance? Explain types of inheritance.
6. Explain the concept of friend function with suitable example.
7. Explain binary operator overloading with example.
8. What is file mode? Describe the various file mode operations available.
