

**Q-1 Select the correct option from the following questions.****(10)**

- 1) _____ is called the insertion or put to operator.
(a) & (b) >> (c) << (d) ::
- 2) A _____ is a collection of objects of similar type.
(a) Data (b) Class (c) Object (d) Function
- 3) _____ means that the code associated with a given procedure call at run time.
(a) Static binding (b) Early binding
(c) Dynamic binding (d) None of the above
- 4) _____ is a selection control structure.
(a) if (b) switch (c) if...else (d) All of above
- 5) _____ function is used to copy one string into another string.
(a) strcpy() (b) strcopy() (c) stringcopy() (d) StrCopy()
- 6) While defining derived class, base class name is written on _____ side of : symbol.
(a) Both (b) Any one (c) RHS (d) LHS
- 7) By default, main () in C++ returns _____.
(a) int (b) void (c) char (d) char*
- 8) Which one of the following is not a valid argument passing mechanism in C++?
(a) pass by value (b) pass by selection (c) pass by reference (d) pass by address
- 9) Which one of the following operators cannot be overloaded?
(a) the function call () (b) += (c) ?: (d) >>
- 10) A pointer is
(a) A keyword used to create variables
(b) A variable that stores address of other variable
(c) A variable that stores address of an instruction
(d) All of the above

Q-2 Short Questions (Attempt any Ten)**(20)**

- 1) Define class & object as concept of OOP.
- 2) List any four header files in C++.
- 3) Define encapsulation as concept of OOP.
- 4) List all access specifiers and also write their uses.
- 5) Write general form of member function definition for outside the class definition.
- 6) Define destructor and give its example.
- 7) Define inheritance & state two advantages of it.

- 8) What is a virtual base-class? What is use of it?
- 9) What is inline function? Give an example of it.
- 10) What is an operator function? Describe syntax of an operator function.
- 11) How many arguments are required in the definition of an overloaded unary operator?
- 12) List the five operators to be overloaded in C++.

Q-3 A Differentiate OOP & POP. (05)

B Explain different data types available in C++. (05)

OR

Q-3 A Explain features (characteristics) of OOP in detail. (05)

B Explain different operators available in C++. (05)

Q-4 A How many types of constructors we can create in C++ program? Write few characteristics of constructor. (05)

B How you can create arrays of objects? Give an example and explain it. (05)

OR

Q-4 A Explain all operations on Arrays. (05)

B Describe nameless objects and constant objects with example. (05)

Q-5 A Describe the concept of friend function with suitable example. (05)

B Explain Multiple & Multilevel inheritance with example. (05)

OR

Q-5 A Discuss inheritance in private mode & effects on accessibility of base class members. (05)

B Discuss virtual function with an example. (05)

Q-6 A Explain Unary operator overloading with example. (05)

B Explain opening file using open(). (05)

OR

Q-6 A Explain Binary operator overloading with example. (05)

B What is file mode? Describe the various file mode operations available. (05)
