No. of Printed Pages : 02

[82/A-39]

SARDAR PATEL UNIVERSITY
BCA EXAMINATION, IIIrd SEMESTER

Wednesday, 15th November, 2017

2:00 p.m. to 5:00 p.m.

US03CBCA02

[Object Oriented Programming and C++]

Maximum Marks: 70

Q-1

Multiple Choice Question.[Each Question carries one Mark]

[10]

- 1) _____ means "To bind data & functions into a single unit"
A. Inheritance B. Polymorphism
C. Data hiding D. Encapsulation
- 2) _____ is known as scope resolution operator.
A. & B. <<
C. >> D. ::
- 3) _____ is basic run time entity in object-oriented system.
A. Class B. Object
C. Data D. Function
- 4) _____ is used to free/destroy the memory occupied by the objects.
A. Constructor B. Destructor
C. Delete D. None of Above
- 5) Object without name is known as _____.
A. nameless object B. live object
C. constant object D. default object
- 6) _____ operator is also known as insertion or put-to operator.
A. cin B. cout
C. both (A) and (B) D. Non of Above
- 7) One base class & multiple derived classes means _____ inheritance.
A. multiple B. hierarchical
C. multilevel D. hybrid
- 8) Which of the following is a valid function prototype in C++?
A. int sum(int a, int b, int c = 0) B. int sum(int a = 0, int b, int c)
C. int sum(int a, int b = 0, int c) D. int sum(int a = 0, int b, int c = 0)
- 9) Which one of the following operators can be overloaded?
A. :: B. New
C. .* D. Sizeof
- 10) The correct function name for overloading the addition (+) operator is
A. operator+ B. +operator
C. operator(+) D. operator:+

[PTO]

- Q-2 Give Answers for the following:(Any ten) [20]
1. List out the features of OOP.
 2. Define : variable and constant.
 3. List out types of operator available in C++.
 4. Define constructor and write characteristics of constructor
 5. Define nameless object.
 6. Explain cout in C++ with example.
 7. List situations when inline function is not expanded inline.
 8. What is the difference between private & protected members of the class?
 9. Discuss default arguments briefly.
 10. What is an operator function? Describe the syntax of an operator function.
 11. What are input and output stream?
 12. List out five operators to be overloaded in C++.
- Q-3 A) Explain the concept of class & object with example. [5]
 B) Explain Encapsulation in detail with example. [5]
 OR
- Q-3 A) Explain Polymorphism concepts of Object Oriented Programming with example. [5]
 B) Explain enumeration data types with example. [5]
- Q-4 A) Explain parameterized constructor with example. [5]
 B) Explain declaration and initialization of two dimensional array with example. [5]
 OR
- Q-4 A) Explain the forms (methods) of member function definition for the class with an example. [5]
 B) Explain Array of object with example. [5]
- Q-5 A) Explain multiple & multilevel inheritance with suitable example. [5]
 B) Discuss inheritance in public mode & its effects on accessibility of base-class members. [5]
 OR
- Q-5 A) Define inheritance. List all types of inheritance. Discuss the syntax of defining base-class & derived class. [5]
 B) Explain the concept of friend function with suitable example. [5]
- Q-6 Explain Unary and Binary operator overloading with example. [10]
 OR
- Q-6 Define file mode. Explain opening file with following ways: [10]
 (a) by constructor function (b) by open ().
